

STORAGE SILO

The silo on a TBU base, **SIL-TBU**, is a **dynamic storage type of industrial equipment for intensive use**. This silo on a TBU extractor conveyor is designed for the storage and evacuation of sorted products to a packaging line, or installed at the heart of a sorting process as a buffer silo for sorting at breaking load. Its simple, robust and rigid design makes it highly reliable, with optimised maintenance costs. Manufactured in our Sedan workshops. Its ergonomics have been designed to comply with legal requirements in terms of **personal safety**, servicing and maintainability, in accordance with current technical standards, in particular the **Machinery Directive 2006/42/EC**.

GENERALITIES
