

## BAG OPENER

The bag opener is a heavy-duty piece of industrial equipment used to open and empty plastic bags contained in selective collections or raw household waste. It regulates the throughput of the sorting line. Its simple, robust and rigid design makes it highly reliable, with optimised maintenance costs.

Its ergonomics have been designed to meet legal requirements in terms of **personal safety**, servicing and maintainability, in compliance with current technical standards, in particular the **Machinery Directive 2006/42/EC**.

### GENERALITIES

Brand	Identification	Length	Width	Nominal flow	Year of fabrication	Condition
Matthiesen	SR3K3	1 800 mm	1 600 mm	10 000 kg/h	2014	Used
