

Vauché

WHO ARE WE ?

The company VAUCHÉ, in Sedan (Ardennes), was founded in 1860, in the sector of the boiler making industries towards the manufacture of boilers and other articles for brewery.

It was in 1981 that the company set up a reconversion of its activity in the manufacture of equipment for the treatment of garbage and household waste. These high-tech equipments allow approaching the big export.

In 2024, the company proudly celebrated its 164th birthday.

WASTE**

Our activity is the **design and realization of complete units of treatment and recycling of waste**, delivered turnkey.

We are also **specialists in modernization/renovation of sorting centers**, with several achievements with clients that we have been accompanying for more than 40 years.

We offer solutions in all areas of sorting and recovery of solid wastes.

You will appreciate the quality of our materials as well as the flexibility and responsiveness of our team in your personalized accompaniment.

OUR SKILLS

Engineering offices,
conception,
development

Companies entirely dedicated to the design of waste sorting and recovery units

Extensive study capacity : engineers, studies managers, project managers, designers.

43 years' experience in the field of large file sorting and file management

A project department that offers tailor-made, adapted, high-performance and innovative solutions

The mastery of all the techniques and workflows, sorting and recovery of waste

More than 250 installations in France and abroad with processing units with a capacity of up to 1 200 t of waste sorted per day

Design and manufacture of our own equipment

Great flexibility and production capacity.

OUR POTENTIAL

Our particularity and our strength are the expertise and control of the entire process with complete autonomy : together, we define the process, we offer you innovative solutions adapted to your expectations and your requirements, we design and we manufacture our equipments, we install it and we support you through commissioning and operational assistance.

This evolution of structure and competences enables us today to compete and to obtain very representative markets in France and abroad and to guarantee your satisfaction and optimal operating efficiency on new lines as well as on renovations of lines.

Client satisfaction

The measure of the perception of the client's satisfaction on the quality of the service provided in relation to its requirements is carried out by :

The engineering office

Certificates of capacity, as reported by the clients

The return of information provided by the site manager and the project manager throughout the course of the project

Returns of information contained in warranty reports or after-sales service

Internal analysis of this information can trigger corrective action if the need arises.

IMPROVEMENT

Monitoring and measurement of processes

All production, support and management processes are monitored based on Performance Quality objectives.

The data produced by the measurement are collected by the Process Drivers and transmitted according to the frequency defined by the Quality Department in order to increment the Quality control panel.

The data is reviewed by Management to determine future objectives and improvement actions.

Product monitoring and measurement

Product monitoring is carried out by :

The project managers throughout the piloting of the various projects

The Office of Studies by the validation of the plans

Manufacture by self-inspection registered by the manufacturing manager

The final acceptance of the product is validated upon receipt by the customer in accordance with the contract and the arrangements planned at the time of the order.

Our After-Sales Service is at your disposal for the supply of spare parts and wear and tear, as well as for complete diagnosis of your installations, compliance with new regulations, rehabilitation interventions ...

Our department, Services and Training, offers on your site training adapted to your personnel of operation, maintenance and supervision. In order to optimize the operation and efficiency of our machines.

THE PRESIDENT'S MESSAGE

For a family-run and secular company like ours, sustainable development is not an empty word. If we are only one of the links in the big environmental chain, we feel that our duty does not end with the simple design and implementation of sorting processes. Our design team is looking for tomorrow's solutions to better serve our clients.

If each one, at his level, pushes his demands and skills further, we will win together this race against time which consists in leaving future generations a clean land. I feel all the more involved in this responsibility that I am now the guarantor of the story "Vauché".

Forty-three years ago, we were pioneers in the implementation of installations in France and we were able to bring this know-how beyond our borders. Based on this accumulated experience after 250 installations built around the world, the men and women composing our company express their skills in the realization of increasingly innovative units.

Vauché is today a solid, reliable and innovative leader at the service of the environment.

A handwritten signature in black ink, appearing to read 'Stéphane Vauché', with a stylized, sweeping flourish at the end.
